

REWRITE THE FOLLOWING CLAIMS:

10. (Amended) A composition of matter comprising: an admixture of an aliphatic hydroxyl containing dendrimer with at least 8 hydroxyl groups per molecule; a glycoluril derivative; a photoacid generator; an organic solvent; and an organic base.

11. (Amended) A composition according to claim 10 wherein said aliphatic hydroxyl containing dendrimer with at least 8 hydroxyl groups per molecule is a phenolic resin.

12. (Amended) A composition according to claim 11 wherein said glycoluril derivative has the general formula:

Glycoluril derivatives

in which R is methyl, R<sub>1</sub> and R<sub>2</sub> can be selected individually from the group consisting of alkyls having 1-6 carbons, alkenyls, and alkoxys.

13. (Amended) A composition according to claim 11 wherein said photoacid generator is selected from onium salts of Group IV elements.

14. (Amended) A composition according to claim 11 wherein said photoacid generator is selected from onium salts of Group VIa elements.

15. (Amended) A composition according to claim 11 wherein said phenolic resin, said glycoluril derivative, said photoacid generator and said solvent form an admixture comprising from about 40% to about 80% of said phenolic resin from about 5% to about 25% of said glycoluril derivative and from about 2.0% to about 20% of said photoacid generator.
